- Ensure ZeroIMPACT™ on users and help desk

- Provide users with continued access to workstations, resources and e-mail, regardless of their migration status, ensuring business continuity

- Avoid any increase in calls to the help desk related to the migration

- Update permissions automatically and resources such as Active Directory, SharePoint, Exchange, IIS, File and Print, SQL Server, Cluster servers and SMS, saving administrative effort

- Synchronize Active Directory objects between source and target, lowering administrative overhead

- Control the project and get up-to-the minute reports with its test mode, advanced delegation capabilities, project management interface, multitude of reporting options and granular "undo"

- Migrate, synchronize and restructure Active Directory—all in one step

- Mirror a production Active Directory environment to a test environment to ensure safe testing of future Active Directory changes

Quest® Migration Manager
for Active Directory

ZeroIMPACT™ Restructuring and Merging of Active Directory

Empowering you to efficiently migrate and restructure your Active Directory, Quest® Migration Manager for Active Directory ensures true coexistence between migrated and unmigrated users. Migration Manager simplifies migration processes and integrates workflow—from pre-migration analysis through setup, object migration, resource updating and post-migration cleanup. Whether your organization is restructuring to meet specific security regulations or undergoing an acquisition or merger, Migration Manager provides the features necessary to meet its evolving needs.

### Deliver ZeroIMPACT™ Active Directory–to–Active Directory Migration

Online migration empowers you to restructure your Active Directory during business hours with no adverse effect on user productivity. With Migration Manager, end users can continue working, totally unaware of the migration project. And Migration Manager eliminates the need for migration-related tasks after business hours, reducing the administrator's workload.

Support Coexistence Throughout Migration

Migration Manager allows users to access all network resources, such as servers and printers, regardless of their migration status. This powerful solution delivers complete coexistence, helping to ensure a seamless migration process and decrease help desk calls both during and after the migration.

Ensure Secure Migration Execution and Management

Migration Manager gives you complete control of your migration, helping to increase the security and reliability of your project. Take advantage of its test mode to verify the accuracy and security of your migration plan. Migration Manager optimizes your post-migration environment, preserving passwords and removing source accounts and related references, working to deliver a secure migration process from beginning to end.
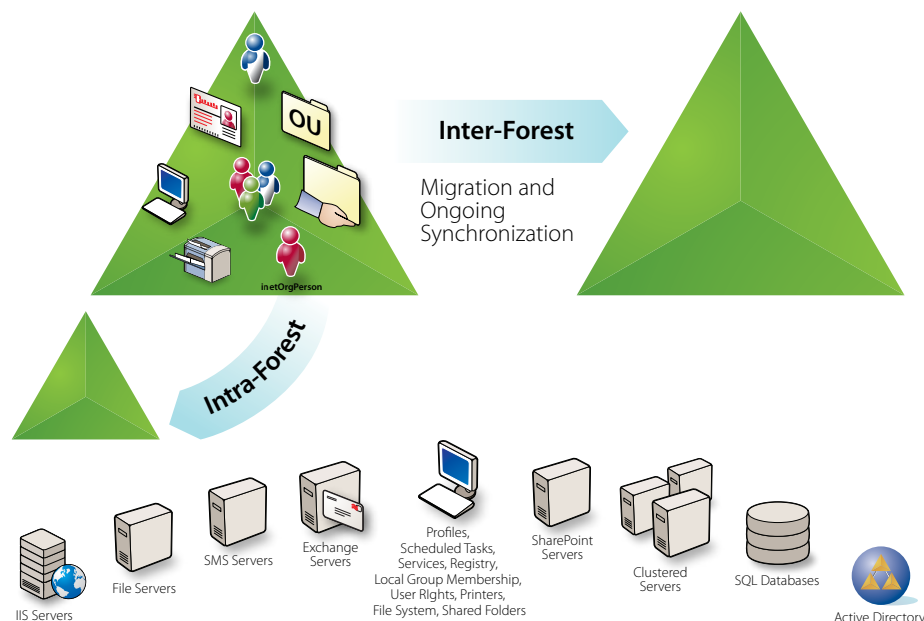

Practice Flexible, Comprehensive Management

Migration Manager offers a robust set of management features, from pre-migration planning and analysis to updating permissions. What's more, this flexible solution can be used for any migration scenario, from "pruning and grafting" to a complete restructuring of your Active Directory.

Reduce Costs and Ensure Zero Network Downtime

Migration Manager automates migration and enables parallel processing, saving valuable time and ensuring that your network has zero downtime. With Migration Manager, costs are reduced as the project timeline is shortened. It scales to meet the demands of even the largest organizations, making migration fast and efficient.

Automated Updates: Migration Manager automatically updates permissions and resources, including Active Directory, SharePoint, Exchange, IIS, File and Print, SQL Server, cluster servers and the System Management Server (SMS) from Microsoft. Eliminating the need for manual updates and reducing the chance of human error, Migration Manager saves you valuable administrative time.

Flexible Synchronization Options: With its exclusive AutoSync technology, Migration Manager delivers a new level of flexibility with migration processes. You can identify the domain controllers you wish to use, schedule the exact time of synchronization, and specify the containers you wish to synchronize. With Migration Manager's flexible options, you can synchronize Active Directory objects between source and target in the manner and timing that best suits your organization.

Comprehensive Management Tools: With its robust project management interface, advanced delegation capabilites, numerous reporting options and granular "undo" functionality, Migration Manager gives you complete control of the migration project and arms you with the reporting data you need to make informed decisions. Additionally, Migration Manager allows you to test your migration processes in a non-production mode, helping to ensure migration success and efficiency.

Efficient Migration Tools: Migration Manager provides the tools you need to migrate, synchronize and restructure Active Directory—from a single console. Empowering you to complete migration processes from a central interface, Migration Manager saves you time, helps to reduce the chance for error and saves you valuable training dollars.

Mirrored Test Environment: In order to accurately test your migration processes, you must be able to duplicate your environment to account for its unique variables. Migration Manager gives you the ability to easily mirror a production Active Directory environment, thus ensuring that your testing processes are effective and safe and do not affect your production environment.

About Quest Software, Inc.

Quest Software, Inc., a leading enterprise systems management vendor, delivers innovative products that help organizations get more performance and productivity from their applications, databases, Windows infrastructure and virtual environments. Through a deep expertise in IT operations and a continued focus on what works best, Quest helps more than 100,000 customers worldwide meet higher expectations for enterprise IT. Quest provides customers with client management as well as server and desktop virtualization solutions through its subsidiaries, ScriptLogic and Vizioncore. Quest Software can be found in offices around the globe and at **www.quest.com**.
